#### Description:

*Designed for community dental/public health courses, **Dental Public Health and Research** also serves as an ideal resource for board exam preparation or for dental hygiene practitioners.*

**Dental Public Health and Research** explores the ever-changing world of dental public health—a dynamic career pathway for dental hygienists—and provides readers with the key tools needed to effectively practice and conduct dental hygiene in the public health setting. The **Fourth Edition** features an increased emphasis on the dental hygienist's understanding of research principles, and an expanded discussion of public health science. Readers are guided through dental hygiene fundamentals,

programs, research, and practical strategies to give them a true understanding of what it takes to be a successful, contemporary dental hygiene practitioner.

Conduct research in dental public health with emphasis on disease surveillance, health services research, program evaluation, causes of oral diseases, and systemic/oral health interactions. Improve access to dental care for underserved populations and the quality of care for all populations. Plan, implement, and evaluate community oral health programs. Increase the use of preventive dentistry and interdisciplinary models in dental care delivery systems. Excel in research, academic, and administrative careers in Dental Public Health. Inform other dental providers and students about the practice Dental public health is the science and art of preventing and controlling dental diseases and promoting dental health through organized community efforts. It is that form of dental practice that serves the community as a patient rather than the individual. What career paths are possible in Dental Public Health? DPH residents pursue careers in academic teaching and research, administration, program planning and management, health policy, business, industry and government. Opportunities may arise with the Center for Disease Control & Prevention (CDC), World Health Organization (WHO), National Institute of Health (NIH), and many local and state governments. Dental public health research involves looking at how clinicians work with patients from different demographics, to promote oral health and prevent disease. This can affect quality of life, lead to poor school attendance, difficulties in speech and eating problems. Our research focuses on monitoring and improving oral health. Dental public health research is patient and community facing. Through our Dental Clinic, we have a large data warehouse of patient profiles and activity, which provides invaluable data for our research. Our dental students deliver quality dental care in the Dental Clinic to around 3,000 local people every year. We offer treatments such as gum treatment, filling and preventative treatment, crowns and bridgework, and oral health promotion.
