Description:

An extraordinary compilation of the plants used by North American native peoples for medicine, food, fiber, dye, and a host of other things. Anthropologist Daniel E. Moerman has devoted 25 years to the task of gathering together the accumulated ethnobotanical knowledge on more than 4000 plants. More than 44,000 uses for these plants by various tribes are documented here. This is undoubtedly the most massive ethnobotanical survey ever undertaken, preserving an enormous store of information for the future.

Native American Ethnobotany. A Database of Foods, Drugs, Dyes and Fibers of Native American Peoples, Derived from Plants. Search the database. The database of ethnobotanical uses can now be searched using two different methods. Native American Ethnobotany includes information on plant use by Native American people. Most of the plants used are native to North America, but some are not. Some are plants that were introduced into North America " some perhaps in pre-Columbian times and some certainly thereafter " and that became naturalized, growing spontaneously. Names used in Native American Ethnobotany are not intended in any way to offend anyone. I have elected to use the names for peoples reported in the original sources. This is a list of plants used by the indigenous people of North America. For lists pertaining specifically to the Cherokee, Iroquois, Navajo, and Zuni, see Cherokee ethnobotany, Iroquois ethnobotany, Navajo ethnobotany, and Zuni ethnobotany. *Abronia fragrans* (snowball-sand verbena) Used as both food and medicine. See article for complete list of uses. *Acer glabrum* var. *douglasii* (Douglas maple), used by Plateau tribes as a treatment for diarrhea. Native American Ethnobotany is ; the most complete of my several efforts that have resulted from asking those naive questions. The book is intended to help anyone interested in the use of plants understand which ones have been used by native North American peoples to treat disease, for food, fiber, and dye, and for many other purposes as well. As I began this work, I found I was in the company of some of the great American students of ethnobotany of the past- Huron H. Smith, Francis Densmore, Melvin Randolph

Built with RDF, Sparql, Jena. Project for Data Semantics class at Indiana University taught by Professor Ying Ding in 2014. Webapp for exploration of the NAE database (2014 version). Dependencies. Java 1.8. Native American Ethnobotany also contains information on 106 kinds of nonvascular plants (algae, fungi, lichens, liverworts, and mosses). The data for nonvascular plants are much less complete than those for vascular plants, however. Native American Ethnobotany includes information on plant use by Native American people. Most of the plants used are native to North America, but some are not.
