Quite the same Wikipedia. Just better. The state's economy has been described by University of Alaska Anchorage economist Scott Goldsmith as a "three-legged stool" - with one leg being the petroleum and gas industry, the second leg being the federal government and the third leg being all other industries and services. Between 2004 and 2006, the federal government was responsible for 135,000 Alaska jobs, the petroleum sector provided 110,000 jobs and all other industries and services combined for 122,000 jobs.[9]. Read the full-text online edition of The Future of Alaska: Economic Consequences of Statehood (1962). This is the second volume to be based upon a long-range study of Alaska as a region, or group of regions, in process of basic economic and political change. The first volume, Alaska in Transition: The Southeast Region, selected a homogeneous part of the whole of Alaska for special examination, a region which is currently undergoing economic expansion in one major natural resource sector and decline in another.
