This book highlights innovative geospatial research across a variety of research sites including urban areas in the United States, United Kingdom, Belgium, Canada, and Mexico. Some topics include the residential mobility of sex offenders, journey to crime analysis, spatial vulnerability to crime, spatial configurations of homicide, and spatial contagion of drug offending. This chapter provides a general guide to the expansive field of spatial analysis for criminology. Careful attention is paid to the importing of techniques outside of the field of criminology to be adapted and used in criminological research. An emphasis is placed on the overall foundation concepts to crime analytic techniques. Drawing on quantitative research, this book explains the dynamics of nonviolent struggle and why civil resistance campaigns historically are more effective and successful at achieving their objectives than violent campaigns.
