Link}, journal={Canadian Association of Radiologists Journal}, year={2016}, volume={67}, pages={28 - 40} }. T. Link. Published 2016. Medicine. Canadian Association of Radiologists Journal. The radiologist has a number of roles not only in diagnosing but also in treating osteoporosis. Online Musculoskeletal Radiology Book.Â One of the most common findings in skeletal radiology is increased radiolucency of bone, most properly termed osteopenia. This term is much preferred over terms such as â€œdemineralizationâ€ or â€œundermineralizationâ€, since we really canâ€™t tell the exact mineral status of the patientâ€™s bone from the radiograph alone. The most common cause by far of osteopenia is osteoporosis. However, there are many disease entities that can cause osteopenia, so the mere finding of radiolucent bone does not make this an automatic diagnosis.Â There are many causes of generalized osteoporosis. Some of the major ones are listed in the table below. Mnemonic = VINDICATE.
