Anthropologists, archaeologists, biologists, and ecologists report the latest thinking on human evolution at a level suitable for undergraduates. The six papers are from a March 1992 symposium in Los Angeles. Includes a glossary without pronunciation. This volume represents the proceedings of the Irving Stone Memorial Symposium on "The Origin of Humans and Humanness." Scientists in the fields of anthropology, archaeology, biology and ecology were invited to discuss their research concerning the how's, where's and why's of the evolutionary history of humans. While showing how the science of paleontology works, the origin of our genus, Homo, is discussed in chapter 2. With emphasis on those humans who first made regular use of stone tools some 2 million years ago, chapter 3 interprets ancient human behavior and ecology from an archeological perspective. You can also purchase this book from a vendor and ship it to our address: Internet Archive Open Library Book Donations 300 Funston Avenue San Francisco, CA 94118. Better World Books. Includes bibliographical references and index. "A contribution of the IGPP Center for the Study of Evolution and the Origin of Life (CSEOL), University of California, Los Angeles"--T.p. verso. Classifications. Dewey Decimal Class. 573.2. Library of Congress. GN281 .O736 1993. The Physical Object. The book does a great job covering the major transitions in human evolution from Lovejoy's article on primates, sex, and Australopithecines to Walker's article on the origins of the Genus Homo and Homo erectus, an article on stone age technologies, Stringer's article on the origins of H. sapiens, Conkey's article on paleolithic art, and the final article on culture. and its evolution. This is a great book for someone who already has introductory background knowledge and presents some new theories and thinking in human evolution. Each chapter is concluded with a list of references and a list of How humans became human: Cassandra Turcotte of the Center for the Advanced Study of Human Evolution considers one of our most important questions. Human origins is being investigated and understood through evolutionary theory, which sees humans placed with the other great apes on the Tree of Life. How humans became 'human': Cassandra Turcotte of the Center for the Advanced Study of Human Evolution considers one of our most important questions. Human origins is being investigated and understood through evolutionary theory, which sees humans placed with the other great apes on the Tree of Life.
