Why a book dedicated to rare cancer management? Given the large variety of rare cancers, they take up a significant part of our daily practice. Therefore, we owe it to our patients with rare tumours that we use the knowledge gained in the treatment of the more common cancers to provide them with a better future. The authors have analyzed the literature and recommend treatments for rare cancers based on results from past studies. We hope that this book will be an aid to those treating rare cancer cases about which, up to now, little has been published, and will reassure our patients that they have not been forgotten. In an era where evidence based medicine (EBM) has become the focus of clinical research and medical practice, the treatment of rare diseases presents a unique challenge. EBM practice is founded on a hierarchy of evidence, with the greatest value being assigned to evidence derived from sources with robust statistical power, such as meta-analyses and randomized clinical trials.
